

Bonus 5 - řešené konby

$$\textcircled{1} \int \left(2x^5 + 3 - \frac{1}{x^3} \right) dx = 2 \cdot \frac{x^6}{6} + 3x - \frac{x^{-2}}{-2} + C = \underline{\frac{x^6}{3} + 3x + \frac{1}{2x^2} + C}$$

$$\textcircled{2} \int x \cdot \sin x^2 + 3 \, dx = \left| \begin{array}{l} t = x^2 \\ dt = 2x dx \end{array} \right| = \int \frac{1}{2} \sin t \, dt + 3x + C$$

$$= -\frac{1}{2} \cos t + 3x + C = \underline{-\frac{1}{2} \cos x^2 + 3x + C}$$

$$\textcircled{3} \int (5x-1)^6 dx = \frac{1}{5} \cdot \frac{(5x-1)^7}{7} + C = \underline{\frac{(5x-1)^7}{35} + C}$$

$$\textcircled{4} \int_1^2 (3x^2 - 2) dx = \left[x^3 - 2x \right]_1^2 = 8 - 4 - 1 + 2 = \underline{\underline{5}}$$
