

Bonus 3 - 2E 5EM' konB1

① a) $y' = \cos x (2x^3 - 3x^2 + 2) + \sin x (6x^2 - 6x)$

b) $y' = \frac{2x}{x^2+1} - \frac{1}{\sqrt{x}}$

② a) $z'_x = 6x^2y^2 - 10xy$

$$z'_y = 4x^3y - 5x^2$$

b) $z'_x = 4(x^2 + 3y)^3 \cdot 2x = 8x(x^2 + 3y)^3$

$$z'_y = 4(x^2 + 3y)^3 \cdot 3 = 12(x^2 + 3y)^3$$
